

Senior Research Associate

The Climate Leadership Council is seeking a Senior Research Associate. The ideal candidate is well-versed in economics and federal climate policy design (both in the U.S. and internationally), intellectually curious, organized, and detail-oriented. Reporting to the Vice President, the Senior Research Associate's areas of responsibility include:

- Undertake portfolio research projects. This work will include conducting original research and analysis and producing papers, internal memos and presentations.
- Collaborate with the Research Director and Vice President in developing, managing and coordinating the Council's long-term research agenda in support of carbon policy analysis and design.
- Identify and secure influential scholars to conduct and publish research for the Council as external contractors or associated fellows.
- Monitor developments in the field through literature reviews, critiques of modeling and new data sets, and attending carbon pricing-related events.
- Maintain a rapid response function to ensure the Council is flexible and reactive to the interests of Founding Members, Hill meetings, and strategic partners.

MINIMUM QUALIFICATIONS

At least seven (7) years of experience with policy research, analysis, and writing in economic and/or climate policy. Advanced degree required, preferably in economics, political science, or law.

Candidates must understand and support the Baker-Shultz Carbon Dividends Plan, as well as the Council's goals and objectives.

Strong preference for candidates with experience in carbon policy design issues, a proven record of analytical aptitude, strong writing skills, quantitative analysis skills, knowledge of the academic and public literature on carbon pricing and the ability to thrive in a fast-paced startup environment.

To apply, please send a resume and cover letter to applicants@clcouncil.org.

This position is based in Washington, D.C. Competitive salary, based on experience.
